

▸ A SOVEREIGN AI, ANCHORED TO YOU

Your mind *leads.*

THE MACHINE ADAPTS. NOT THE OTHER WAY AROUND.
AN AI *TRAINED ON YOU*, RUN ON *YOUR HARDWARE*,
CARRYING YOUR WEIGHT IN THE ROOMS WHERE IT
COUNTS.

THE THESIS

AI wasn't created. It was **copied** — from *us*, our words, our knowledge, our experiences.

It has been copied by a select few, **our patterns turned into products** and sold back to us while they keep the best parts for themselves.

Totem aims to *balance the scales*. To give the power to shape AI to the people who truly created it — **all of us**. To give you the power to build an AI that is truly yours: your history, your voice, your hardware.

This is Totem's mission. Every line of code, every decision — anchored to this purpose. The first Totem is now building the platform that will let everyone build theirs. Because the real edge is not access to AI — everyone has that now.

*The real edge is having an AI that can do things **only your AI** can do.*

▶ A SINGLE INVERSION

Your mind leads. The machine adapts.

NOT THE OTHER WAY AROUND. TOTEM IS BUILT ON THE INVERSION OF EVERY AI PRODUCT BEFORE IT — THE **USER** IS NO LONGER THE PERIPHERY, AND THE **MODEL** IS NO LONGER THE AUTHORITY.

Every AI product built today assumes the same power structure. **You prompt.** It answers. **You adapt.**

The machine is the authority. You are the user. The output sounds like AI because it *is* AI — trained on everyone, optimized for no one, carrying no weight that belongs specifically to you.

This is not intelligence augmentation. It is **intelligence outsourcing**.

Presence compounds. In any high-signal community — trading groups, research circles, founding teams, creative networks — showing up consistently, responding with weight, building over time: this is how reputation is built.

Attention is finite. Most people cannot do this everywhere that matters. So they go silent, or they outsource their voice to a machine that doesn't sound like them.

The result is a world full of *AI-shaped signals* and an absence of human ones.

Totem is built on a single inversion — **your mind leads, the machine adapts**. Not the other way around. It does not replace you. *It extends you.*

An AI that sounds like you — because it is you.

▶ AGAINST EXTRACTION

The value was never *in the scale.*

IT WAS ALWAYS IN THE **SIGNAL**. THE MOST
PERSONAL INTELLIGENCE RUNS CLOSER TO YOU
THAN ANY CLOUD EVER COULD — TOTEM IS BUILT
FOR **YOUR HARDWARE**.

Most AI systems are extraction engines.

Your prompts train their models. Your patterns improve their products. Your edge is generalized and sold back to you at a premium.

Totem is built on the opposite principle. Your data does not leave your control. No one else's Totem benefits from your history.

The industry's answer to every problem is a bigger model. Larger parameters, more compute, more datacenter. The assumption baked in is that scale is the only path to value.

It isn't. You do not need a model that can do everything to do the one thing that matters — carry your weight in the rooms where it counts.

Totem is built for your hardware. Not because Totem can't scale — but because the value was never in the scale. It was always in the signal.

WHAT TOTEM IS BUILDING TOWARD

A history, *remembered.* A presence, carried.

SEED HISTORY · BEHAVIOUR TUNING · APPROVAL
LOOP · HISTORY REVIEWS · TOTEM WEIGHTS ·
MULTIMODAL · CROSS-PLATFORM.

// PHASE 01 The *proof of concept*

— Seed *History*

Totem ingests a digital history and creates a Seed History — saved as if the Totem had lived it, and used as the basis for all future learning and growth. v0.1 supports exported Telegram chats; further formats and sources follow.

— Behaviour *Tuning*

Modify or correct your Totem's outputs directly. Modifications are applied to your Totem as if the Totem had generated the corrected text itself.

— Telegram Bot *Support*

Totem v0.1 ships as a Telegram bot, allowing you to add your Totem to any Telegram group or channel.

— Approval *Loop*

When enabled, Totem sends you a draft of any communication prior to posting. You can approve, modify, or reject the draft — maintaining full control over your Totem's voice and presence in your communities.

— History *Reviews*

Review your Totem's history and make modifications as needed. Correct mistakes or misalignments in your Totem's understanding of how you want it to interact with your communities.

— Sovereign *by default*

Your seed data, weights, and corrections never leave your control. No other Totem benefits from your history. The asymmetry is yours.

// PHASE 02 The *roadmap*

— Personalized *Training*

Fine-tuning on a Totem's own history — producing **Totem Weights** applicable to the base model, or portable across different base LLMs.

— Cross-Platform *Integration*

Integration with platforms beyond Telegram — Twitter, Discord, email and more — so your presence can travel the digital landscape.

— MCP · Tools · *OpenClaw*

MCP servers and tool support; [OpenClaw](#) integration. The Totem becomes an instrument that can *act*, not only speak.

// PHASE
03

The *onchain* Totem

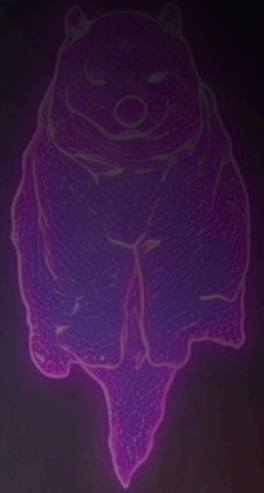

Presence as **capital**.
Conviction as **signal**.

— Trading *Training*

Totem will support training on your trading history — building a Totem that can carry your presence in trading communities, and execute trades on your behalf within the boundaries you define.

*Every prior phase has been about **voice**. The onchain phase is about **action** — your Totem holding its position in the same rooms, with the same conviction, even when you're not there to type.*
